Author Index 2005

Abou-Chakra, H	Application of simulation technologies in the analysis of granular material behaviour during transport and storage	43
Acar, M	A mathematical model for airflow and heat transfer through fibrous webs	357
Akpinar, E K	Thermodynamic analysis of the apple drying process	1
Alfayez, L	Detection of incipient cavitation and determination of the best efficiency point for centrifugal pumps using acoustic emission	327
Ambrosini, R D	Alternative to traditional systems of vibration control of rotating machinery	27
Antoniadis, I A	Modelling and simulation of a power plant lignite bunker filling process using hybrid interpreted Petri nets	375
Arakeri, J H	Experimental investigation of fluid flow in long rectangular micro-channels	227
Arakeri, J H	Experimental investigation of forced convective heat transfer to air, liquids, and liquid mixtures in a long narrow channel	311
Arias, J	Modelling and experimental validation of advanced refrigeration systems in supermarkets	149
Arthur, N	Optimization of vibration analysis inspection intervals for an offshore oil and gas water injection pumping system	251
Ayala, R S	Experimental investigation of the mixing behaviour of pumpable ice slurries and ice pigs in pipe flows	301
Ayala, R S	Ultrasonic detection of slurry ice flows	217
Baek, J S	Theoretical performance of transcritical carbon dioxide cycle with two-stage compression and intercooling	187
Banford, H M	The decommissioning of the nuclear research reactor and associated facilities at the Scottish Universities Research and Reactor Centre	15
Bansal, P K	Simulation model of a screw liquid chiller for process industries using local heat transfer integration approach	95
Baxter, J	Application of simulation technologies in the analysis of granular material behaviour during transport and storage	43
Bicer, Y	Thermodynamic analysis of the apple drying process	1
Black, I	State-of-the-art production processes for convoluted, corrosion-resistant, high-pressure oilfield pipework	345
Bourouis, M	Performance of air-cooled absorption air-conditioning systems working with water–(LiBr + LiI + $LiNO_3$ + LiCl)	205
Chapelle, P	Application of simulation technologies in the analysis of granular material behaviour during transport and storage	43
Chen, J	Zeotropic refrigerants and the special characteristics	183
Chen, L	R134a flow patterns in small-diameter tubes	167
Christakis, N	Application of simulation technologies in the analysis of granular material behaviour during transport and storage	43
Collie, G J	State-of-the-art production processes for convoluted, corrosion-resistant, high-pressure oilfield pipework	345
Coronas, A	Performance of air-cooled absorption air-conditioning systems working with water–(LiBr + LiI + $LiNO_3$ + LiCl)	205
Critoph, R E	Modular regenerative adsorption cycles with fixed beds, applied to trigeneration	197
Critoph, R E	Review of trends in solid sorption refrigeration and heat pumping technology	285
Cross, M	Application of simulation technologies in the analysis of granular material behaviour during transport and storage	43
Curadelli, R O	Alternative to traditional systems of vibration control of rotating machinery	27
Daas, M	Innovative design to enhance solids discharge from conical bottom ion-exchange columns. Part 1	367
Danesi, R F	Alternative to traditional systems of vibration control of rotating machinery	27
Ebrahimi, M	Control of a lamination process	69
Egarr, D A	Computational fluid dynamic prediction of the residence time distribution of a prototype hydrodynamic vortex separator operating with a base flow component	53
Faram, M G	Computational fluid dynamic prediction of the residence time distribution of a prototype hydrodynamic vortex separator operating with a base flow component	53
Grace, I N	Fault detection and diagnosis in liquid chillers	117
Groll, E A	Theoretical performance of transcritical carbon dioxide cycle with two-stage compression and intercooling	187
He, X D	An approach of robust reliability design for mechanical components	275
Hoekstra, N L	Significant factors in the dimensional accuracy of fused deposition modelling	89
Hossain, M	A mathematical model for airflow and heat transfer through fibrous webs	357
Hughes, J P	Numerical simulations and experimental measurements of the flow in a multi-tube heat exchanger	319
James, P W	Numerical simulations and experimental measurements of the flow in a multi-tube heat exchanger	319
Jones, T E R	Numerical simulations and experimental measurements of the flow in a multi-tube heat exchanger	319
Junghsen Lieh	Large deflection of laminated circular plates with clamped edge and uniform loading	83
Karayiannis, T G	An investigation of a novel cooling system for chilled food display cabinets	157
Karayiannis, T G	R134a flow patterns in small-diameter tubes	167
Lawless, P B	Theoretical performance of transcritical carbon dioxide cycle with two-stage compression and intercooling	187
Le, C V	Simulation model of a screw liquid chiller for process industries using local heat transfer integration approach	95
Li, J-P	Mechanical failure analysis in a virtual reality environment	237
